## RDAgritech Testimonials – Dairy

### Tim Driscoll – Second season after conversion

“ When we started our dairy conversion discussions one of our main focuses was that our effluent design and management was a high priority and had to be as close to idiot proof as possible. To achieve this we used **RDAgritech** to design and manage our effluent pond construction. We found the team at **RDAgritech** to be very professional and we achieved the results we wanted quickly. By using **RDAgritech** I believe that it also made the effluent consent process more seamless. I would recommend **RDAgritech** to anybody contemplating dairy conversion or needing to update their effluent system. ”

### Bevan Jones – Second season after conversion

“ We engaged **RDAgritech** to provide a full effluent system design for our new Dairy conversion. **RDAgritech** did a great job with the design and co-ordinating all the various suppliers that we needed. We ended up with exactly what we wanted. They were onsite regularly throughout construction, checking on the contractors and they issued certification and sourced warranties at the end of the job. We are now in our second season and I am pleased to report that the system continues to be solid and hassle free. The team at **RDAgritech** were great to work with and I would happily recommend them. Their experience and expertise has been a real benefit to my operation. ”

### Miranda Hunter – (RDAgritech worked alongside Miranda on several recent projects)

“ Just to let you know we have lodged the consent for Mataura client. On lodging the application – I went through it with the Consents Officer to check with her she had all the information required – she is very happy with the information that is being provided and commented that it helps immensely. Our Riversdale client has been granted consent at a hearing on Wednesday – again a comment was made by one of the Councillors during the hearing on the high quality of the application. I am very happy with the service / team work that is being pulled together – to get a good end result for the clients. ”
